

25 HYDRANT VALVE OPENING SIGNALLING DEVICE

The signalling device makes it possible to monitor the opening of the DN25 hydrant valve by means of an inductive sensor.

The advantages of using signalling device:

- possibility of connection to an existing control panel SAP
- control of rooms and parts of the object without monitoring
- active counteracting theft and devastation
- high sensitivity of the sensor

Parameters of the sensor:

Connection diagram	PNP / NO
Sensitivity	0...1.5 mm
Power supply voltage	10...30 V DC
Connection	power cord, length 2 m 3 x 0,14 mm ²
Leaktightness class	IP67
Working current max.	200 mA
Working temperature	-25...70°C
Switching frequency max.	500 Hz

Body material	stainless steel
The sensor has the CE marking
